

Assignment No - 6

Implement a program to demonstrate buttons, textfields, checkbox, radiobuttons and toggle button along with their event handler.

1. Button

A button is a clickable GUI element used to perform an action when tapped.

Types :

- Text button
- Elevated Button
- Icon Button
- Floating Action Button

ex. In a login app when the user taps the login button. The app checks username and password.

2. TextField

A text field is an input box where user's can type text

ex. Enter name
Enter Email

- Enter password
- search bar

Features :

- placeholder text
- input validation
- password hiding option

ex. In a registration form user type their email and password in text fields

5] Check Box

A checkbox allows user to select one or more options from a list

ex. select hobbies
Accept terms and conditions
choose multiple interest

- ex. i
- ☒ Reading
 - ☒ Music
 - ☒ Sports

4] Radio Button

A radio button allows user to select only one option from a group

ex. select gender
choose payment method
choose delivery option

☐ female ☐ male ☐ other

5] Toggle Button

Toggle Button is used to turn a setting ON or OFF

characteristics :

- ON
- OFF

ex. Dark mode ON/OFF
Notifications ON/OFF
WiFi ON/OFF
Location ON/OFF

Features - Instant state change
provide visual feedback
used for setting

ex. In app settings : Notifications : ON

Dark mode : OFF
User simply taps to switch the state.

• Conclusion :

In mobile App Development, UI components like Buttons, Textfields, checkbox, Radio Buttons and Toggle Buttons are essential for user interaction. They help users enter data, make selection and perform action easily.

Assignment No - 7

Implement a program to demonstrate spinners, alert, popup, toast along with event handler.

1. Spinner

- A spinner is a dropdown menu that allows users to select one option from a list.
- It saves screen space by showing options in a collapsed form and expands when clicked.

Key Features :

- only one option can be selected at a time
- Displays selected item after selection

ex, selecting country
choosing category
selecting language
choosing city

ex, In a registration form a user selects their country from a spinner dropdown list.

2] Alert

- An alert dialog is small message box that appears on the screen to give imp information confirmation
- To notify the user or ask for a decision before continuing

Features :

- Displays a title and message
- contains action buttons
- requires user interaction

Uses - Confirm delete action
Exit configuration
Warning message.

3] Pop-up

- A pop-up is a small window that appears over the current screen to display additional information or options
- To provide extra content without navigation to a new screen.

Features : Appears temporarily
can contain text, images or button.

Uses :

- promotional offer
- Additional setting
- quick actions
- login reminder

4] Toast

- A Toast is a short temporary message that appears at the bottom of the screen and disappears automatically.
- To provide quick feedback to the user.

Features :

- No user interaction required
- Disappears automatically
- Used for short message

Uses :

"login successful"
"Item Added to cart"
"saved successfully"
"Internet Not Available"

Conclusion - Spinner, Alert, Pop-up & toast are important UI components in mobile apps. They help users select options, receive important messages and get quick feedback.
